- The product is

suitable for foods in which fat does not form the outer phase. Typical oil-in-water emulsions are cream, milk and mayonnaise.

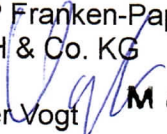

Use to protect products during transport and for short-term storage

not suitable for foods in which fat forms the outer phase, such as butter, buttercream or grease glazes.

The examination of the suitability of the packaging material for the specific filling material, the behaviour of the filling material, during and after packaging as well as possible interactions between the product and the packaging materials are the responsibility of the user (packer, distributor)and, where appropriate, require appropriate measures from the latter. In particular, the user must: but check for yourself whether the packaging material is suitable for the intended use. For this purpose, the Packaging manufacturers are not liable.

Best regards

M & P Franken-Papier
